

DF-FAP FULLY ADJUSTABLE PRIORITY FLOW CONTROL VALVE WITH BYPASS**DESCRIPTION**

10 size, 7/8-14 thread, "Delta" series, fully adjustable priority flow control valve with bypass.

OPERATION

The DF-FAP allows pressure compensated flow from (3) to (1), regulated by the pressure present at (3). Excess flow bypasses out (2). Can be used as a restrictive pressure compensated flow control when the bypass port (2) is blocked.

FEATURES

- Hardened cage and spool for long life.
- Industry common cavity.

When used as a bypass flow control in applications where the priority flow port will be blocked by external valving, bypass pressure drop will increase unless a small amount of leakage is provided for the priority port. Consult factory.
